

Air-Cleaning Blowers
Ventilation, Pressurization, and Purging

AERO

CONDITIONER COMPANY, LLC.

*AERO now manufactures the first line of truly **FILTERLESS** industrial air-cleaning blowers, ventilators, and pressurizers.*

Cement Plants and Foundries
Bulk Product Conveyors
Pulpits and Control Rooms

Mining/Tunneling Vehicles
Motor Control Centers
Grain Elevators

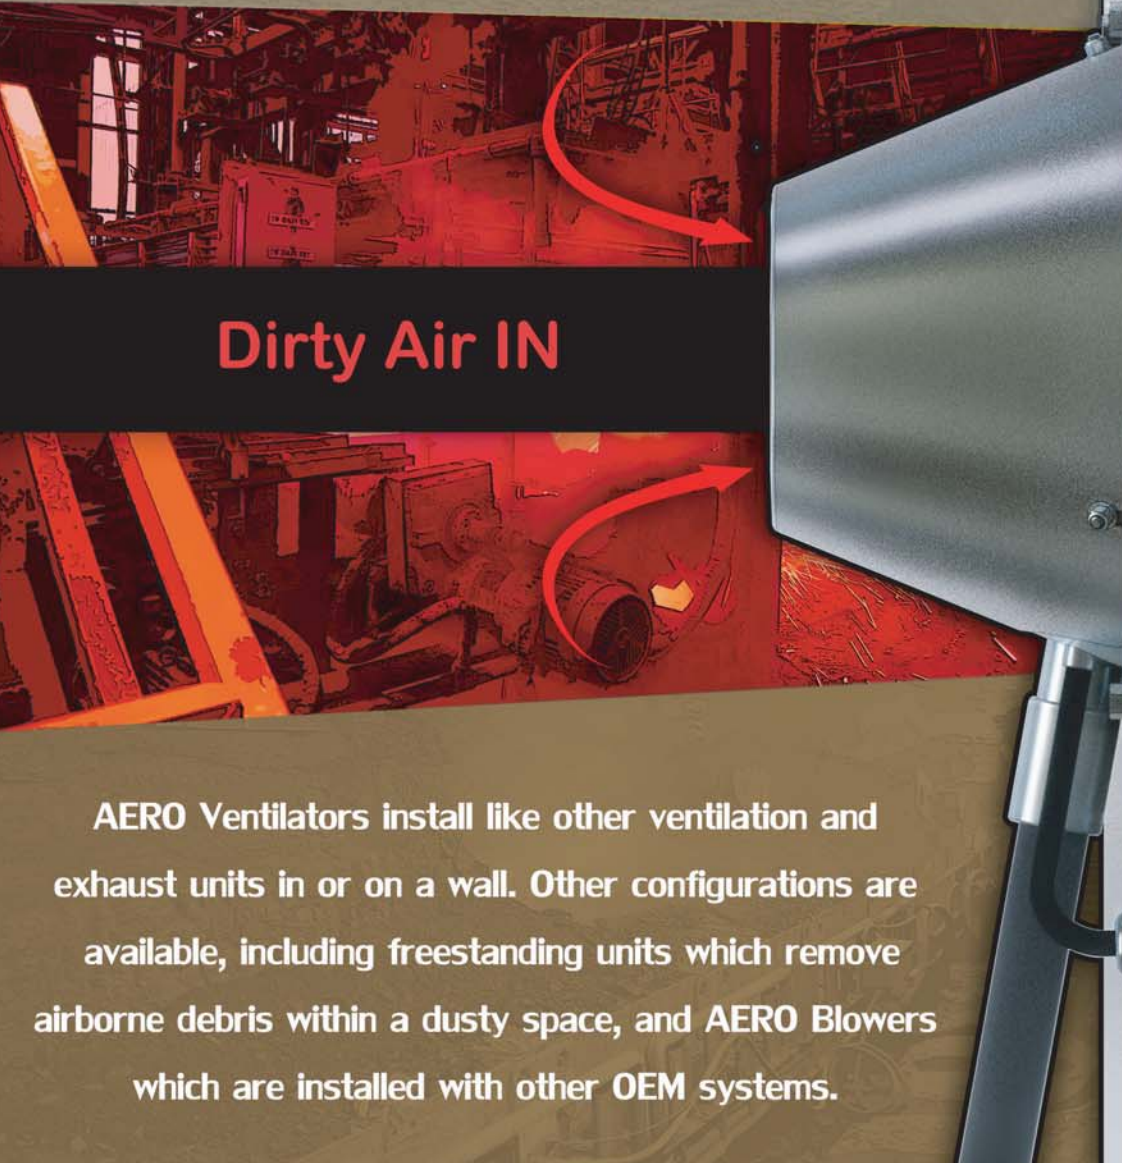

Agricultural Buildings
Military Camps
Emergency Housing

PATENT PENDING

*Our products are designed to remove particles **4** microns and larger from dusty and corrosive environments -- with little to no maintenance.*

Dust and sand particles removed from the air are ejected back into the dirty environment, onto the ground, or into a collection receptacle for product recovery.

Dirty Air IN

AERO Ventilators install like other ventilation and exhaust units in or on a wall. Other configurations are available, including freestanding units which remove airborne debris within a dusty space, and AERO Blowers which are installed with other OEM systems.

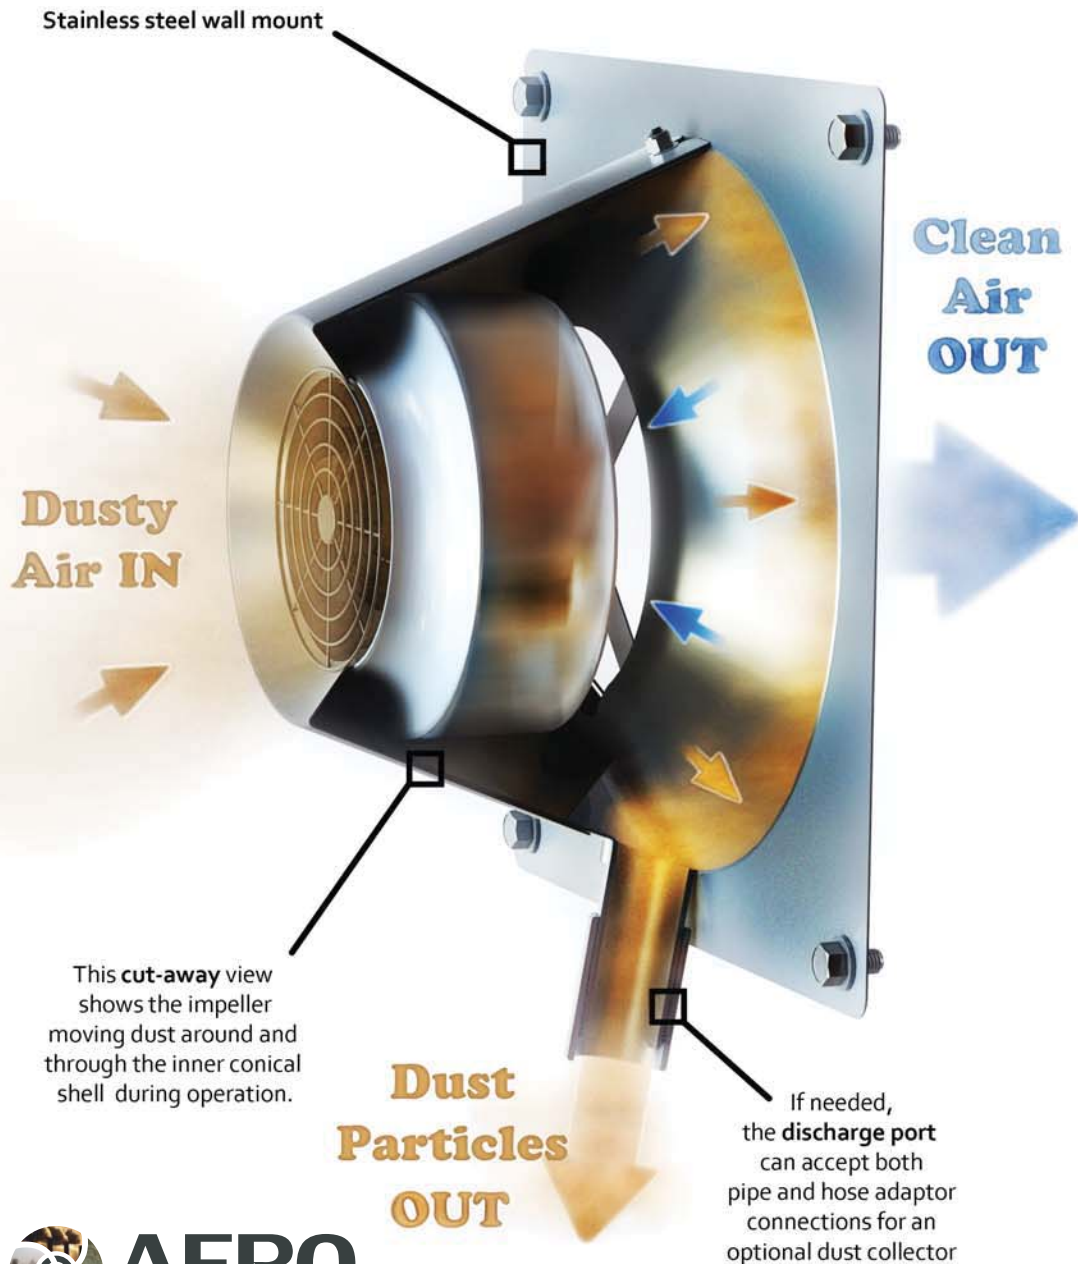

AERO Blowers provide clean air to cool, ventilate and pressurize control rooms, operator cabs, electrical sub-stations, air compressors, and furnaces that need protection from dusty surroundings.

Clean Air OUT

This patent-pending design removes dust and other particles from the exhaust air of factory work spaces. Pulling dirty air out of the space creates a vacuum which is then filled with clean air from outside.

makes all its equipment in the U.S.A.***

How They Work

Pulls dust-laden air in through the front grille

Separates the dust, sand, and other particles from the air

Ejects the unwanted particles

Blows clean air into or out of the ventilated space

No Filters to clog or replace means little maintenance
