

Press Release

**Griffin Electric Submersible Pumps – pumps you can trust since 1934**

**Griffin Pump and Equipment Inc.** now offer a complete line of electric submersible pumps. Whether it is clean water, gray water, or trash laden effluent, **Griffin** can provide the right pump for your application. The advantage is that it can provide a significant lifting force as it does not rely on external air pressure to lift the fluid.

Electric submersible pumps are available for flows as low as a few gallons per minutes to several hundred gallons per minute, with head conditions to several hundred feet. High or low, Griffin can meet your pumping need.

Electric submersible pumps are available with several options and configurations. Contact Griffin today for more information. +1 866 770 8100

Features:

- Fully self priming
- Available in 120 volt single phase or 460 volt 3 phase
- Run dry capability on some models
